# AS, Student Course

text course

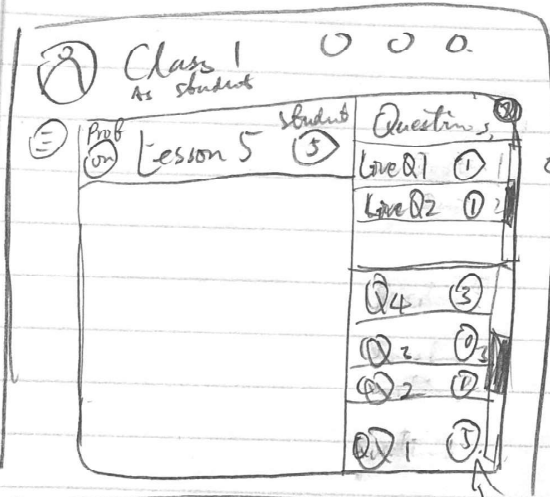

when Ask question,

Question will be linked to

the Range of the elements  
you are viewing,

Also, Live Question Board will show  
the Questions and all answer Questions

The Main idea is to create an interaction between students and professor during their study. So a student could raise questions at specific location of the question or specific minutes of the video. These question will send a notification to professor and ask the professor to answer the question. By the same time, other students viewing the same content and already pass the location will receive notification as well. These students could decide if or not they want to answer this questions.

only show Question from block  
you have read and

Live means the student raise this  
Question within an hour and is  
online now,

on clock

After the student offline, Live Question  
will become Question show in bottom block

the circle means how many answers,

New students who just arrive the location of the study element  
can see all the questions pop up and if they have the same question  
they could view the question answers from professor or other students.

The problem I tried to solve is lack of interaction when doing online  
course. A lot of time I am studying with online course, it just following  
the instruction. My idea is to create connection between all the online  
classmate and between professor and students.

The ideal scenario is a lot of people studying the same material. At a  
tough position of the course, the students could discuss all together to  
help each other otherstand.
